

Foods

# Milk powder

With a TAGARNO microscope

High product quality

## Effective process control

Develop high quality seed coating and secure the business

As an important tool for quality control and claim handling, camera microscope will help ensure high quality in production as well as lower claim rates. Talking visual inspection of magnified powder samples, a digital microscope will play a central role. It will enable the operator to locate and document unresolved and burned particles. This secures the final quality of the product as well as customer satisfaction.

Being able to inspect sediment washers for identification of unwanted particles and foreign objects is a quick way to quickly adjusting production processes.

Especially the ability to enter a dialogue on the findings as well as documenting the results is important to attain the quality of the final milk powder products.

**We are now able to do effective process control, carry out any adjustments and attain the quality of our products**

The perfect package for

# Quality control of milk powder

## Microscope

## Accessories
