Plastic inspection

With a TAGARNO microscope

Results

Quality control of injection molded plastics

Identify runner system wear and approve final products with high image quality.

A good plastic component starts with a high quality runner system.

That's why a Danish company uses their TAGARNO and Measurement app to track the diameter of the runner system components. If the diameter changes, it's a sign of wear and something needs to be done.

The microscope also makes documenting their work easy. By pressing a button on the control box, the microscope automatically captures and saves a photo of the inspection.

No more having to take photos on smartphones, sending them to your e-mail and then saving them on a computer.

Saving images directly to the microscope has increased our efficiency

The perfect package for

Plastic inspection

Microscope

Accessories

Ring light (white)
View every little detail

Lens 1x Plan
Magnify at the right level

Apps

 **Measurement**
Measure distances, angles,
diameters and more

 **Focus stacking**
Create ultra-sharp images with no
blurred or out of focus areas

“**With presets, we are consistent with settings across inspections and have increased our efficiency**”
